(Please call L1 DOC if you do not understand the instructions below.)

If **OMTF shows the CSCports error** and/or **EMTF shows the numberOfBroke**

- Open the ports tab in the SWATCH cell for the subsystem(s) that is in erro
- If there are more than 4 input ports in error on any OMTF board excluding

1. Ask the DAQ shifter to issue a hard reset.
2. Ask for another hard reset if the errors do not go away.
3. If after 3-4 hard resets the errors remain call the EMTF and/or OMTF on-call, or the L1 DOC.
